

HUMEAT™

Human donor meat

About HUMEAT

Humeat is a revolutionary innovation that offers donor meat from the bodies of consenting humans as a resource for human consumption. We are the first company to provide a system that renders human meat completely edible without the risk of contracting 'kuru' (a degenerative disease associated with the accumulation of an abnormal glycoprotein known as prion protein (PrP) in the brain.) So the consumption of our specially formulated human meat is completely safe, ethical and much better for the environment than conventional animal agriculture.
